

DUMBLE®

OVERDRIVE SPECIAL

The Dumble Silverface pedal has been inspired by the classic sounds of the late 1970s Dumble amplifiers. The pedal features four controls including Gain, Volume, Depth and Tone. The pedal can be used at either 9v or at 18v to give a little more headroom. Dumble Silverface amplifier owners include SRV, Jackson Browne, Carlos Santana and many more...

- Gain:** *This controls the amount of drive left for less right for more.*
- Depth:** *This enhances the gain structure for a fatter sound.*
- Tone:** *This controls the EQ of the pedal left for bass and right for treble.*
- Volume:** *This controls the volume of the pedal left for less right for more.*
- Input:** *Located on the right. Connect this to your guitar.*
- Output:** *Located on the left. Connect this to your amplifier.*
- Power:** *Pedal can be used with 9V battery or 9-18V power supply.*
