

The J Mascis Garbage Face Jr™

WHAT IS THE GARBAGE FACE JR PEDAL??

Matthew Holl, the owner of Wren and Cuff has had a working relationship with J Mascis of Dinosaur Jr for many years now. Eventually Matthew approached J with the idea of doing a signature pedal made to sound like J's favorite vintage muff pedal.

That pedal, an early 70's "ram's head" Big Muff® that he purchased while on tour in 1987 is the model used to create the Garbage Face Jr. Matthew and J working together made sure that the final unit was a dead on replica of his treasured pedal.

The Controls:

VOLUME Makes it louder or not so loud when ya turn it.

tone Changes the position of the mid-notch in the EQ

GAIN Adds more distortion/fuzz

Other Info:

CURRENT DRAW This pedal will draw around 5.5mA

POWER This pedal has **no** option for a battery. A center-**negative** 2.1mm barrel regulated power supply (typical guitar pedal power unit) must be used. Please use a power supply intended for effects pedals.

BYPASS Effect on/off switching is done via a 100% mechanical 3PDT foot-switch, otherwise known as "true- bypass"
