## Baby Blue Overdrive (BJF design)

Thank you for your purchase of the Baby Blue Overdrive by One Control.

- ***Description:***

Designed by pedal guru Bjorn Juhl (BJF/BJFe), the One Control Baby Blue Overdrive is based on the BJFe creation FUZZ 1 (originally released in 2000), utilizing a discrete circuit that combines dynamic overdrive and fuzz. The Baby Blue OD produces sublime tone at reduced rhythm volumes as well as cranked up lead output, whether set to a low gain clean, or a saturated wall of sound. Often compared to the most sought after boutique American style tube amplifier, the Baby Blue OD utilizes the finest modern components, painstakingly selected and tuned by Bjorn Juhl himself, to produce this classic, NOS sound.

- **Controls:**

Drive: Adjusts the intensity of overdrive.

Treble: Adjusts the high frequencies of the output signal.

Volume: Adjusts overall signal volume.

Footswitch: Engage or bypass the pedal (Truebypass)

- **Specifications:**

Input Impedance: 240K

Output Impedance: <2K

Power supply: Negative Center DC 9V or 6F22 Battery.

Current Draw: 1.5mA

Dimensions: 61(W)x112(D)x32(H) mm 2.41(W)x4.41(D)x1.26(H) Inch

Weight: 296g 10.44oz.
