

Thank you for purchasing a **RockBoard®** Rack Panel! The **RockBoard®** 19" Rack Panel Single and 19" Rack Panel Double are simple solutions for mounting the **RockBoard®** MOD V2 series or newer MOD models (MOD 4, MOD 5, MOD 7) into standard 19" rack units. The required M3 x 4 mm mounting screws, standard rack screws and a TX10 screwdriver are included with the Rack Panel. A Phillips screwdriver is required for assembly (not included).

RBO B RACK PANEL 1

RBO B RACK PANEL 2

Montage

STEP 1

Place your **RockBoard®** MOD in the mounting slot and use the included TX10 screwdriver to screw the M3 x 4 mm screws through the assembly bracket into the threads on both sides of your MOD to lock it in position.

STEP 2

Place the **RockBoard®** 19" Rack Panel in your 19" rack and mount the panel with a Phillips screwdriver and the included rack screws.

STEP 3

The detachable front plate of the **RockBoard®** MOD unit is higher than 1 U, so it might overlap your rack units above or below the **RockBoard®** 19" Rack Panel. If this causes problems, you can remove the front plate from your MOD by removing the screws using a PH2 Phillips head screwdriver. The mounting nuts of the jack sockets do not need to be removed.

STEP 4

When the **RockBoard®** 19" Rack Panel is safely mounted, you can connect your cables and start to use the MOD.

Note: The manufacturer reserves the right to change these specifications without notice.
