

THE PRESTIGE

JHS PEDALS

Add some magic to your tone with this booster/buffer/enhancer. The final act in small footprints boosts.

Controls

VOLUME - Controls the output volume. Set at zero it works as a buffer/enhancer. In the first 25% range it gives different flavors of the buffer/enhancer as well as slight volume increases. In the 25 to 50% range you have a dynamic solo boost. At 50% or more it will send your amp into overdrive mode, pushing the tubes into the natural breakup you love about your amp.

Jacks

INPUT - Lower jack on the right side of the pedal.

OUTPUT - Jack on the left side of the pedal.

POWER - Uses 9V DC Negative Center. Do not use more than 9V DC. Your warranty will be voided.
100mA max consumption.
